Amdt. dated February 28, 2007  
Reply to Office Action of August 31, 2006

Docket No. QSI-0001C2

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of delivering reports to a client over a distributed network, comprising:

sending application code for creating reports to the client over the distributed network, in response to a first report request from the client;

sending report data to the client over the distributed network, in response to report selections made by the client, if the client does not already have the report data; and

creating a report using the report data and the application code.

2. (Original) The method of claim 1, wherein the client comprises a web browser.

3. (Currently Amended) The method of claim 2, wherein the application code for creating reports comprises Javascript code.

4. (Currently Amended) The method of claim 1, wherein for subsequent report requests from the client, corresponding report data is sent to the client, if the client does not already have the corresponding report data, and a corresponding report is created by the application code using the corresponding report data.

5. (Currently Amended) The method of claim 1, wherein the application code, when executed by the client, creates a navigation frame and a report frame.

6. (Currently Amended) A method of creating reports at a client side using report data sent over a distributed network, comprising:

receiving application code for creating reports from a server over the distributed network, in response to a first report request sent from the client side;

receiving report data from the server over the distributed network if the report data is not already present at the client side; and

creating a report using the report data and the application code.

7. (Original) The method of claim 6, wherein the client side comprises a web browser.

8. (Currently Amended) The method of claim 7, wherein the application code for creating reports comprises Javascript code.

9. (Currently Amended) The method of claim 6, wherein for subsequent report requests at the client side, corresponding report data is received from the server, if the corresponding report data is not already present at the client side, and a corresponding report is created by the application code using the corresponding report data.

10. (Currently Amended) The method of claim 6, wherein the application code, when executed at the client side, creates a navigation frame and a report frame.

11. (Currently Amended) An article of manufacture, comprising:

a computer ~~usable~~-readable storage medium having computer readable program code embodied therein for creating reports at a client side using report data sent over a distributed network, the computer readable program code in the article of manufacture comprising:

computer readable program code for receiving, from a server over a distributed network, computer readable application code for creating reports, in response to a first report request sent from the client side; and

computer readable program code for receiving report data from the server over the distributed network, if the report data is not already present at the client side;

wherein the computer readable ~~program~~-application code for creating reports creates the reports based on the received report data.

12. (Currently Amended ) The article of manufacture of claim 11, wherein the computer readable ~~program~~-application code for creating reports comprises Javascript.

13. (Currently Amended) An article of manufacture, comprising:

a computer ~~usable~~ readable storage medium having computer readable program code embodied therein for delivering reports to a client over a distributed network, the computer readable program code in the article of manufacture comprising:

computer readable ~~program~~ application code for creating reports;

computer readable program code for sending the computer readable application code for creating reports to the client over the distributed network, in response to a first report request from the client; and

computer readable program code for sending report data to the client over the distributed network, in response to report selections made by the client, if the client does not already have the report data.

14. (Currently Amended ) The article of manufacture of claim 13, wherein the computer readable ~~program~~ application code for creating reports comprises Javascript.
